

ZOOM RECORDINGS PROCEDURE

Overview

Zoom is a web conferencing service which has been made available to the college faculty and staff based on instructional or college service needs. Its primary purpose is to facilitate online learning and serves as a powerful business meeting tool as well. College faculty and staff with accounts are able to host unlimited meetings and record these sessions to either the Zoom cloud, Panopto, or the host's local computer. Any member of the community can register for a free Zoom account and attend meetings.

By nature, Zoom cloud storage is intended for temporary, non-archival storage. The intent is to provide access to recordings for the immediate or active academic term. Meeting hosts are expected to assess their recordings on a routine basis and, if long-term storage is deemed necessary, community members should download and transfer their cloud recordings to other MCCS or college approved long-term, archival storage solutions such as Panopto, Microsoft One Drive, or the appropriate college network drive.

Retention Period

Starting December 21, 2020, all MCCS colleges will implement a six-month Zoom Cloud Storage retention period. All Zoom Cloud recordings will be retained for 153 days. After 153 days, recordings will be placed in the meeting host's Zoom Trash for an additional 30 days. Once the 30-day Trash countdown expires, the recordings will be deleted permanently. Therefore, permanent deletion will happen after a total of 183 days (153+30 days).

Please note that on December 21, 2020, all recordings made prior to July 19, 2020 will be moved to the Trash.

This retention limit only applies to Zoom meeting or webinar stored in the Zoom Cloud hosted on zoom.us. **This does not apply to Zoom recordings stored locally or those stored in Panopto.** Regarding local recordings, Zoom offers the option for meeting hosts to store recordings locally to their computer. While locally stored recording files are outside the scope of this process, they may still fall under other academic or information technology policies.

Benefits

This retention period will ensure that enough cloud storage remains available to our community during an active academic term and promote the proper stewardship of college data and resources by encouraging the transfer of any meeting or lecture recordings that may be needed for longer-term access to one of the colleges' central storage locations.

What You Need to Do

1. **Be Aware:** Know about the retention period so you can plan accordingly for past and future recordings. Starting December 21 2020, Zoom cloud recordings will only be retained for a total time of six months.
2. **Review Your Older Recordings**
 - **Before December 21, 2020:** Review any of your old Zoom cloud recordings. Go to zoom.us/signin, sign in with your username and password, and click the "Recordings" option in the left-hand menu. Review your "Cloud Recordings" and scan the dates of your recordings. If you wish to keep an older session, click the "Topic" name or the "File Size" link for the recording detail page, and then click "Download" to download all of the files (or hover over a specific element, like "Shared screen with speaker view", and click the download arrow icon to download that individual item). Once downloaded, you can keep the file(s) on your local computer or upload the file(s) to your Panopto My Folder for central storage. Be sure to apply the appropriate protections/permissions for the files based on the content. See "Regulations" below for more details.
 - **On (or after) December 21, 2020:** When the retention period is applied, go to Zoom and sign in. Click "Recordings" in the left menu. Review your "Cloud Recordings." A new column will be visible titled "Auto Delete In." This is the countdown timer before a recording will be moved into the Zoom Trash for an additional 30 days before permanent deletion. Review your older recordings, especially those that will soon be deleted, and take the appropriate action (i.e. download, allow auto-deletion, or manually delete unnecessary recordings immediately).
3. **Faculty Consider/Review Panopto Auto-Backups:** Faculty and staff should initiate the Panopto account for their Zoom recordings. If you are unfamiliar with how to do that please contact your college Brightspace Administrator or their IT department. All new recordings after registration will backup to Panopto automatically, including video, shared screen, and any automated captions.
